

# Using iPassConnect™

Getting online with your iPhone or Smartphone is easy with iPassConnect!  
Just follow these simple steps and you'll be online in no time.

## Quick Steps for Getting Connected

1. Go to a Location with Wi-Fi.
2. Power up your Smartphone and launch your iPassConnect client.
3. Choose your preferred network from the main user interface. iPass® networks are designated with the .
4. Click login or connect.

Map the high-speed access points nearest you at <http://www.ipass.com/hotspot>

## 1 FIND A WIRELESS LOCATION

Take your Smartphone to any one of the thousands of locations around the world where iPass Wi-Fi Hotspots are available – including T-Mobile® HotSpot venues in the U.S. and Europe, AT&T Wi-Fi access points in the U.S., BT Openzone locations in the UK and many more.

You can use the iPass Handheld Hotspot Finder at <http://www.ipass.com/hotspot> to locate access points near you.

## 2 LAUNCH IPASSCONNECT

### IPHONE AND IPOD TOUCH

1. Enable Wi-Fi on your iPhone
2. Join an iPass supported network
3. Launch iPassConnect to verify the location is supported (iPass networks are designated with the )
4. Select "Login" to gain access to the Internet

### WINDOWS MOBILE 6

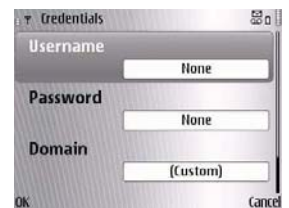

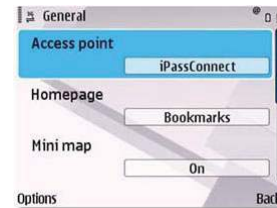

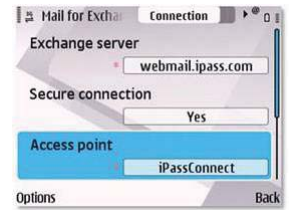

1. Enable Wi-Fi on your phone
2. Launch iPassConnect
3. Any in-range Wi-Fi networks will be listed under **Available Networks** (iPass networks are designated with the )
4. Select a network and select connect and you will be alerted that you are connected

## Quick Steps for Getting Connected (cont'd)

### NOKIA S60

1. Ensure Wi-Fi is enabled
2. Launch iPassConnect
3. Choose the desired network from list and select **Connect**.
4. iPassConnect displays various status messages and shows the message **Connected** upon successful connection. Moreover, the option **Connect** changes to **Disconnect**.
5. To locate iPass Hotspots near you, use the iPass Hotspot finder listed under **Options**.

### Quick Tip

Your user credentials will be saved when you first install the software on your chosen device.

## Tips and Tricks

### IPHONE AND IPOD TOUCH

1. You must use the settings menu the first time you associate with a new iPass enabled network.
2. Once you join a network, your device will remember that network and automatically connect you to it the next time you visit.
3. To gain Internet access, simply launch iPassConnect and select, "**Login.**"
4. Your user credentials will be retained for subsequent sessions

### WINDOWS MOBILE 6

1. iPassConnect allows you to enable "**Auto-Connect**" which will connect you faster without having to launch iPassConnect. To configure Auto-connect:
  1. Select **Menu > Settings > Auto-Connect**
  2. Choose **Enable for iPass Connect**
  3. Select **Ok** (Note - Not all iPass locations may be eligible for auto-connect)
2. Your user credentials will be saved when you first install the software.

### NOKIA S60

1. iPassConnect allows you to enable "Auto-Connect" which will automatically connect to known networks. To configure Auto-Connect for all networks:
  1. Select **Options > Settings.**
  2. Select **Auto-Connect.**
  3. Select **Auto-Connect to Favorites.**
  4. Select **Yes** to enable Auto-Connect
  5. Select **No** to disable Auto-Connect.
  6. Select **OK.**
2. iPassConnect allows you to create a "Connect On-Demand" user experience. This allows you to have your applications determine when you get connected versus having to make a connection before opening your applications. To configure this:
  1. Open any network application (such as Mail for Exchange, Nokia Web Browser or Google Maps)
  2. Go to the settings menu and select, "**iPassConnect**" from the "Access point" menu.

Once you have selected this, you can open any application and, if you need connectivity, iPassConnect will facilitate a connection to the best network available.
